Warning

Rabbits with Myxomatosis

We continue to see cases of Myxomatosis in pet rabbits. This disease is usually fatal and devastating. Your rabbit can be protected from this disease by vaccination. Please ring the Office for more information.

Lampeter Show

14th August 2009

We are pleased to be supporting the Show again this year.

Our stand will be in the far corner of the bottom field, we will have a lucky dip, so why not call by and try your hand or just have a chat.

Warning

Rabbits with Fly-strike

Remember with the warm weather and plenty of flies around you need to check Rabbits for any evidence of fly-strike.

We have "Rearguard" in stock which can provide up to 10 weeks of protection. Please don't hesitate to contact us if you need any advice.

Bovine Tuberculosis Update

Testing is continuing this summer with the situation remaining serious. Short Interval Testing or Breakdown testing can be done by either us or Animal Health. If you have an outstanding TB test, especially Short Interval Test, contact the Office to arrange a date. If you do contact Animal Health they are likely to arrange the test with their Vets (or Animal Health Officers) rather than asking us to do it.

Enzovax & Toxovax

Remember it is now time to order your supplies of Enzovax & Toxovax. Both should be given to ewe lambs at least 4 weeks before they go to the ram.

Please contact the Office to place your order or if you would like to discuss this as part of your on going Flock Health Plan.
